

Product Name :
Filtration in Mango Production Line**Product Code :**
FOOD-MJC0010**Description :**

Filtration in Mango Production Line

Technical Specification :

Fruits pulps need further refine for the later concentration and deep processing. Filtration is essential in mango juice production lines. Composed of 6 scraper blades and a sieve, this type of juice filter is used to separate mixed materials by centrifugal force, and retain refined pulps and screen out oversized ones. With adjustable rotor, stator and helix angle, it is suitable for various fruit pulps.

Capacity(t/h)	Power(kw)	Speed(r/min)	Size(mm)
3-5	18	2950	1800*580*1900
8-10	22	2950	2200*680*1900
