FOOD-APL0002**Description :**

Washing and Sorting

Technical Specification :

Clean and fresh apples are important to make delicious and healthy juice, so apple washing machine is the essential equipment to ensure the sanitation of apples. Apple bubble washing machine is mainly composed of blower, a water tank, roller, spray water tube, hopper and so on. It is a professional machine which is based on high pressure fan wind cargo pump water pressure to produce strong stirring movement, the apples in the water back, improve the efficiency of cleaning, special-purpose machinery so as to achieve clean apples.

Apple sorting machine plays a vital role in fruit juice pre-treatment. The working principle of apple sorting machine is that the stainless steel shafts of the apple sorting machine roll themselves to transport apples, and the apples on the shafts can evenly rotate so that working staffs can easily pick out apples of low or inferior quality. The waste material will finally be conveyed into the receiving tank.
