

Product Name :
Diesel Generators

Product Code :
FOOD-UTLY0007

Description :

Diesel Generators

Technical Specification :

A diesel generator is the combination of a diesel engine with an electric generator to generate electrical energy. This is a specific case of engine-generator. A diesel compression-ignition engine is usually designed to run on diesel fuel, but some types are adapted for other liquid fuels or natural gas.

Diesel generating sets are used in places without connection to a power grid, or as an emergency power supply if the grid fails, as well as for more complex applications such as peak-logging, grid support, and export to the power grid.
